Canals for Treatment

236 TDO KB November 26, 2025 New User resources 4.73K

Overview

When you open the treatment page, you will see the canals TDO believes you will be working on based on the tooth number. You may always add or remove canals as necessary.

Detailed Instructions

To add an additional canal, select the canal from the drop-down box on the first blank line, and the tooth will enter automatically.

If you need to remove a canal, click the gray box on the very left of that row. The box will turn dark gray. Click 'Delete' on your keyboard. You will always be prompted to make sure you want to delete the record.

If you wish to keep the canal but clear out the values, you may use the red X on the right side of the canal. This is helpful if you accidentally clicked the wrong autofill and need to start over on that canal.
