Teeth Numbers

197 TDO KB November 17, 2021 Program Setup 6.20K

Overview

The Digital Office has been made to work with both ADA and international teeth numbers. If you click the ADA or International box on the top the list of teeth numbers will change and you can then enter additional ones you would like the system to use.

Detailed Instructions

To set up your teeth numbers select **Program Setup** from the top menu bar and then select **Teeth Numbers.**

The form gives you an option to decide whether you want to use an ADA or international numbering system. When the form opens, enter all the teeth numbers you would like your system to use. These can include letters as well as numbers. We have UL, UR, Multiple, and Unknown as teeth numbers in our system. It can be helpful to classify a tooth as UL until the proper tooth number is identified and then it can be changed.

You may make as many entries as you like; there is no limit.
