All MTA & CaOH Cases

258 TDO KB December 1, 2025 New User resources, Reporting Tools 7.70K

Overview

On the treatment page in a patient's chart, it is documented if the patient had CaOH, MTA, Ape,x or a Separated Instrument. There will be times when you wish to see a list of all of these patients.

Detailed Instructions

Under **Reports, Daily Reports,** you will see the **All MTA and CaOH Cases** button. Select this report.

Pick the time frame for when you wish to follow up with these patients, as well as whether you would like to include completed cases. If you leave the **Treatment** combo box at the top blank, it will include all types of cases. If you only want MTA cases, select that value from the combo box. When finished with your choices, click **Open Report**

You will see all the cases that match the criteria.

This report is most useful for generating incomplete cases, to make sure all the cases you wish to wait for and follow up on have been scheduled.
