# How to Upgrade Access Runtime 2002 to 2010

621 TDO KB October 12, 2023 Setup, Troubleshooting 10.32K

Overview

Listed here are steps to upgrade MS Access Runtime 2002 to MS Access Runtime 2010. As version 12 of TDO is only compatible with MS Access Runtime 2010 we suggest doing this on all computers at the office.

Detailed Steps

- Browse to **TDO4Endo.com** and login. Select the **Download TDO** tab and download the ***SetupRuntime.exe*** file to your **TDO Builds** folder. This will replace the older ***SetupRuntime.exe*** which was for MS Access Runtime 2002.
- Open to **Programs and Features** on your computer.
- Find the MS Access Runtime 2002 and select **Uninstall**. If it prompts you to reboot your computer after completion, go ahead and do so.
- Once uninstall of MS Access Runtime 2002 has completed, double click and run the ***SetupRuntime.exe*** in your **TDO Builds** folder.
- After MS Access Runtime 2010 has finished installing, run a **TDO Autofix** in order to reset MS Access processes
