

Treatment Page

79 [TDO KB](#) November 26, 2025 [New User resources](#) 7.27K

Overview

How to use the Treatment page.

Detailed Instructions

1. Verify the canals are correct. You may add, remove, or change as required.
2. If you wish to document more than one tooth, select the proper case filter on the top right of the page.
3. Fill in the proper information for each canal.
4. Click the appropriate autofill using one of the 4 boxes to the right of the canal name. You can autofill for all canals at once using the 4 boxes above all the canal names.
5. Open each canal by clicking the check mark button for that line. Make any necessary changes/additions to the data.
6. You may also add/edit data by clicking the top columns to enter the Pulp Status (or any of the other columns) for all canals at once.
7. If you are done for the visit, but not done with treatment, click the **Save** button to save an interim treatment note
8. When finished with treatment, enter the assistant and click the **Comp Date** box. This will mark the page as complete and enter a treatment summary note on the patient's note page.
