

eRx (MDToolbox) - Prescription Interactions

965 [TDOKB1](#) March 4, 2026 [Electronic Prescribing \(eRX\)](#) 3.06K

Overview

MDToolbox eRx users can check prescription interactions by clicking on the **Heart** icon to the right of the prescription. This will check any interactions with the prescriptions listed within eRX. If there is only one drug listed it will say no interaction.

Prescriptions page vs MDToolbox eRX module

This feature only checks interactions with drugs entered in MDToolbox's eRx module; it does not check interactions with drugs entered into the TDO Prescriptions page.

The screenshot displays the 'Prescription Writer' application window. The main area contains fields for 'Drug' (Norco 10 mg-325 mg oral tablet), 'Directions', 'Dose' (0 Table orally x1 perday), and 'Dispense#' (0 Tablet Days: Refills: 0). A 'Dosing Tool/Calc***' window is open, showing patient information (59 yr old Male) and dose range checking. The right sidebar includes sections for 'Rx Type' (New Order, Record History), 'Tools' (Heart icon, Info icon, Star icon, Print icon), and 'Formulary' (Insurance-Coverage N/A, Unknown Coverage). The Heart icon in the Tools section is highlighted with a red box.
